Personal Profile

Software developer student with a background in full-stack development, cybersecurity and IT. Currently pursuing a masters at Arizona State University. Looking to apply my technical skills from education, strong problem-solving skills and a customer-first mentality developed in technical support in any team I'm apart of.

Education

Aug 2025 – Present: MSc in Software Engineering

Arizona State University

Relevant Coursework: Distributed Software, Software Testing

Aug 2019 – May 2023: BS in Computer Science

Queens College CUNY

Relevant Coursework: Algorithms, Cryptography, Data Mining, Internet and Web Technologies, Database systems

Aug 2025: Data Analytics and Agile Leadership Certificate

Pathstream

July 2023: Google Cybersecurity Certificate

Google on Coursera

Experience

Spectrum: Technical Support II

May 2024 – April 2025

- Technical customer support for home video, internet and account calls.
- Consistently exceeded KPIs in customer satisfaction, over 90% first-call resolution rate, and fast handle time throughout consecutive months.
- Promoted from Rep 1 to Rep 2 within 4 months — 2 months out of training. The fastest promotion track available to the role.

Skills

- **Languages:** C#, Java, Python, JavaScript, SQL, XQuery
- **Framework & Libraries:** ASP .Net, MERN Stack, Django, Matplotlib, pandas.py, PyTorch
- **Tools:** Git, Visual Studios, PyCharm, Jupyter, Splunk, WireShark
- **Concepts & Methods:** Distributed Systems, REST API's, Agile Development, Data Mining
- **Other:** Problem-solving, Fast-learner, Organization, Teaching, Communication

Projects

Looking For Group | MERN-stack Project

College Group Project | [source](#)

- Built a real-time group meetup platform with live chat and Leaflet-powered geolocation mapping. Members of a created group can chat with each other and visually see how far all the group members are from the group's designated meetup location.
- Full-stack web application school group project using the MERN development stack. The project was created to demonstrate use and understanding of internet and web technologies and communication protocols.

Distributed Website | ASP .Net Distributed Web Project

University Group Project | [source](#)

- Simple Website with different tools and functions focusing on calling university supplied API's using ASP .Net framework.
- This was a project to create and demonstrate understanding of distributed software systems and concepts.
